

## How to be Asahimas Certified Processor?

Contact us and an AGC representative will visit you to initiate the AGC Processor Certification Program

- A pre-certification trial may be carried out as part of the certification program.
- All technical specifications, including production equipment and process capabilities required shall be reviewed.
- Training required for sales and marketing team will be reviewed.

Certification is awarded once all requirements have been met.

Periodic reassessment process will be applied for our certified processors.

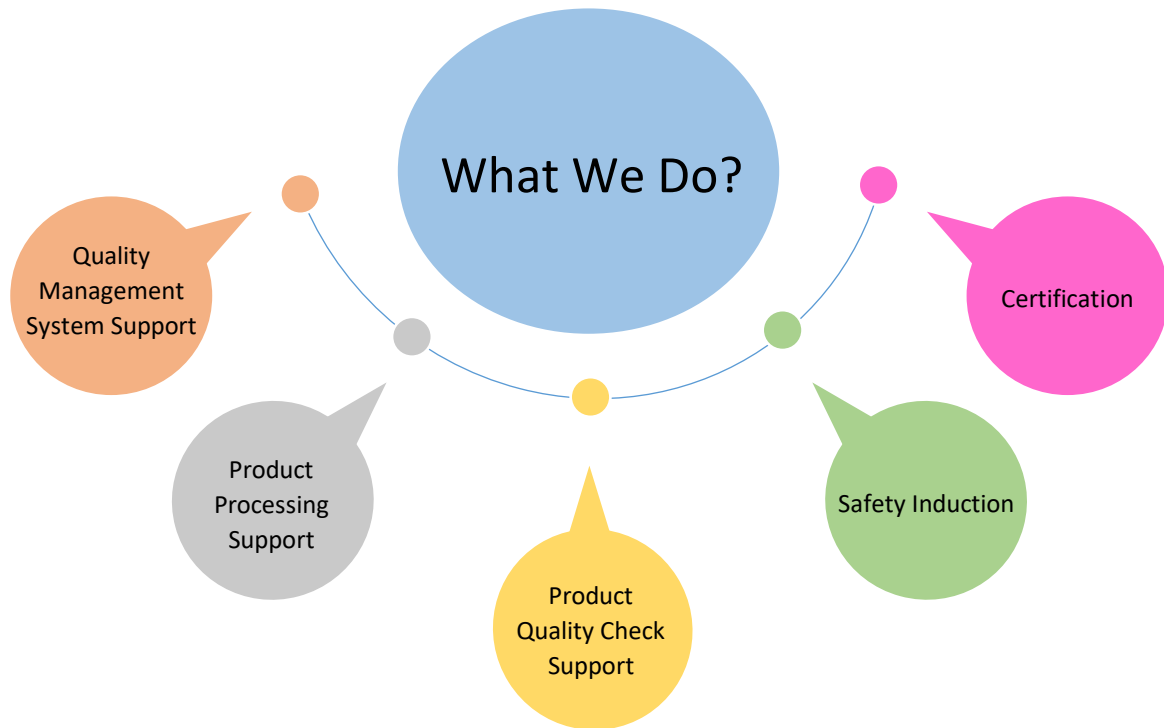

## What is Asahimas TAS?

Based in Indonesia, we are dedicated to our certified processors in providing necessary training in terms of technical knowledge, Quality Management System, Safety, and also the quality aspect from the point of ordering until the glass is installed at project site.

In order to enhance the quality level of our certified processors, we provide periodic assessment of glass processing activities at our certified processors's premises.

We also provide quality inspection at project job site to ensure proper handling, storage, and glass installation are carried out and well understood by all related parties.

In collaboration with respective processors, building owners, and related parties, we seek to better understand the market needs, and provide necessary responses to increases our customer services to the market.
