

PRIVACY GLASS

Elegant, Stylish Privacy

AGC has a full range of dark glass, including grey and green tints in a variety of privacy and thicknesses. The dark tint is obtained by altering the chemical composition of the glass, giving lower light transmission. By reducing the light transmission, dark glass offers visual protection from the outside environment. Dark glass absorbs part of the incoming sunrays, leading to lower temperatures by preventing the sun's heat from entering in the vehicle, meaning reduced need for air conditioning and increased fuel and CO2 savings. Improve skin protection by decreasing the amount of ultraviolet (UV) sunrays transmitted inside the vehicle.

Benefits

- 01.** Gives an elegant, stylish look.
- 02.** Help maintain comfortable temperature and preventing heat entering the vehicle.
- 03.** Enable fuel saving and decreases CO2 emission by reducing air condition needs.
- 04.** Since the dark tint is obtained by altering the chemical composition of the glass, giving lower light transmission and long lasting performance.

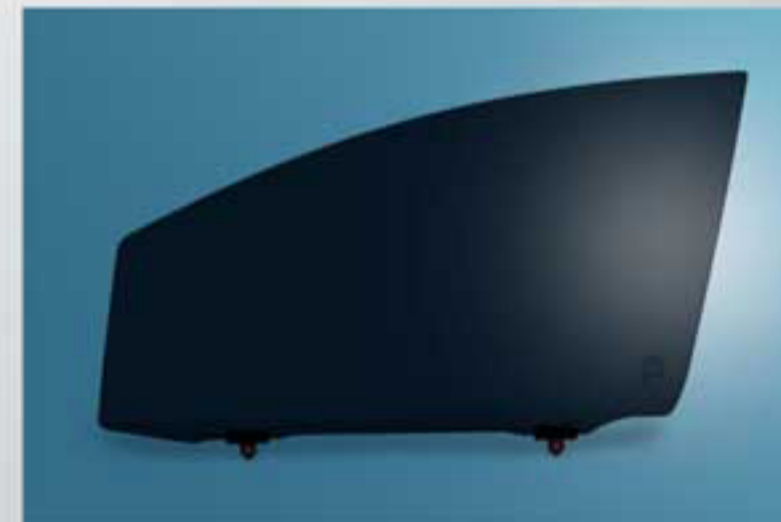

Application

Rear Windshield

Sunroof

Side Windows
